FOREVER FACE SHIELD INSTRUCTIONS

N95 Respirator
Put on before the face shield.

Face Shield
Worn over your mask with the plastic band fitting on the middle of the forehead. 
*Meant to be reused until it becomes damaged or compromised.*

Respirator Elastics
With top mask elastic well above shield elastic.

Shield Elastic
Fitting straight back across your head. Adjustable on the sides.

Comfort Add-ons
1. May wrap the forehead plastic piece with a stockinette (8 inches). Tape in place avoiding the plastic itself as it may impede cleaning.
2. May apply moleskin or duoderm to your skin where the face shield touches it.

Face Shield Assembly Guide
Weave the elastic through the three slits of the plastic tab starting from the slit closest to the clipping hole, going from the inside to the outside as shown.

Insert the longest hook on the edges of the face shield band into the plastic tab as shown, then, with the top tongue laying on top of the hook, press down to fit it in place.

Cleaning Instructions
Follow the “DUHS instructions for extended use or reuse.” Hold the face shield away from face, using Oxivir TB or other hospital approved disinfectant start by wiping the inside of face shield and along the forehead piece in a downward motion away from you. Next use the same wipe to clean the outer surface. Discard wipe and let face shield dry. If face shield becomes cloudy once disinfectant has dried, wipe with a damp paper towel and dry with fresh paper towel.

At the end of each shift, unclip plastic tab and elastic from the face shield band, disinfect the plastic tabs and elastic band with Oxivir TB or other hospital approved disinfectant wipe or spray.
